DIMENSION ASSESSMENT AND PROFILE

Dimension assessed
Operational autonomy Executes tasks under continuous supervision. Requires frequent validation before moving forward and reports incidents to their manager.
Process complexity Routine, well-defined processes with standardized steps and low variability. Errors are detected and corrected quickly.
Decision-making Operational decisions limited to clear procedures. Consults before acting when faced with unforeseen situations.
Technical knowledge Basic knowledge of area processes. Applies tools and systems with guidance. Consolidating the technical foundations of the role.
Stakeholder management Interaction mainly with the immediate team. Communicates task results following established channels and formats.
Reporting level Reports to Coordinator or Senior Analyst within the team. Output feeds into another process before reaching management.
Error impact Errors with limited impact on the immediate process, correctable in the short term without significant consequences for the area or internal client.
Tools and technology Basic use of standard area tools (Excel, SAP, reporting systems). Requires support for advanced functions.

Junior Analyst

Profile oriented toward structured task execution under supervision. Develops technical and methodological capabilities with team support.
